

1.8a: Building a grass lined gulley

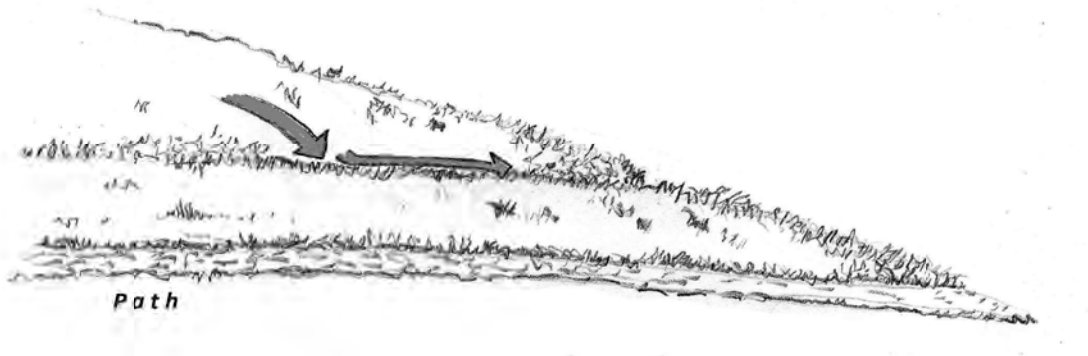

fig.1

If there is a slope nearby, a grass lined lined gulley can be created to collect water and redirect it there, and away from the path.

To make the gulley: cut and roll back, or remove and store, the turf. Then remove and dispose of earth to make a gulley with gently sloping sides (*fig.2*).

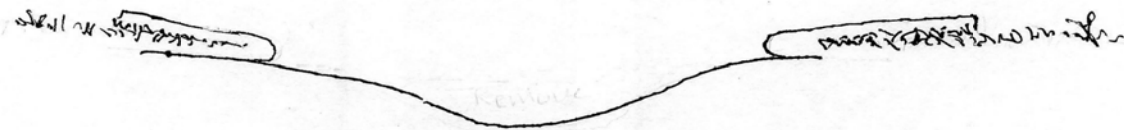

Fig.2

Roll back, or replace, the turf. If there is spare turf available, use it to patch any spaces between the sides (*fig.3, (A)*).
